

INTEGRATED MATH I

Chapter 1: Solving Linear Equations

Student: Liam DeVries

A. Warm-Up

1. $x + 5 = 12$

Hint: Subtract 5 from both sides.

2. $x + 2 = 13$

Hint: Subtract 2 from both sides.

3. $7x = 42$

Hint: Divide both sides by 7.

B. Level Up

4. $2x + 3 = 17$

Hint: Isolate the term with the variable, then divide.

5. $2(x + 1) = 12$

Hint: Divide both sides by 2, then subtract 1.

6. $4x + 8 = 24$

Hint: Isolate the term with the variable, then divide.

C. Spot the Mistake

7. A student solved: $2x + 4 = 16$ $2x = 16$ $x = 16$ Where is the mistake?

D. Choose the Correct Move

(No items generated)

E. Match / Graph / Short Tasks

(No items generated)

F. Challenge

8. Solve: $4(x + 5) - 2 = 30$

Hint: Undo operations in reverse order (add/sub first, then multiply/divide).
