

INTEGRATED MATH I

Chapter 1: Solving Linear Equations

Student: Liam DeVries

A. Warm-Up

1. $x + 2 = 7$

Hint: Subtract 2 from both sides.

2. $7x = 35$

Hint: Divide both sides by 7.

3. $2x + 1 = 9$

Hint: Isolate the term with the variable, then divide.

B. Level Up

4. $3(x + 2) = 24$

Hint: Divide both sides by 3, then subtract 2.

5. $3x + 3 = 5x + 0$

Hint: Collect x terms on one side, constants on the other, then divide.

6. $(\frac{3}{3})x + 8 = 11$

Hint: Clear the fraction by multiplying both sides, then solve.

C. Spot the Mistake

7. A student solved: $5x + 4 = 19$ $5x = 19$ $x = 19$ Where is the mistake?

D. Choose the Correct Move

(No items generated)

E. Match / Graph / Short Tasks

(No items generated)

F. Challenge

8. Solve: $0.6x + 0 = 6.0$

Hint: Isolate and divide by the coefficient (consider decimals).
